

FACULTY OF ARTS
DEPARTMENT OF PHILOSOPHY

PHIL 379 Lec 01 – “Logic II”

Winter Term 2013

Course Outline

Lectures: MWF at 13:00 in MS 217

Instructor: Dr. Nicole Wyatt
Office: Social Sciences 1256A
Phone: 403-220-3166
Email: nicole.wyatt@ucalgary.ca
Office Hours: Mondays 14:30-15:30

Text

- Boolos, G.S., J.P. Burgess, and R.C. Jeffery. *Computability and Logic*. 5th edition. Cambridge University Press. (BBJ)

PASS (Peer Assisted Study Sessions)

This course is supported by the PASS (Peer Assisted Study Sessions) program. PASS provides students with free, organized study groups facilitated by a student who has been successful in the course before. Attending PASS can help you build your understanding of course content as well as learn valuable study skills which will help you to succeed in the course. You will meet your PASS leader and receive more information in the first weeks of classes.

Description

A formal logic consists of a symbolic language together with a semantics, which captures the possible meanings or truth-conditions of the sentences of the language, and a deductive system, which aims to capture which inferences are correct. In this course we study the scope and limits of formal logic by examining the relationship between these three parts of a logic. The major results to be presented include soundness (“the deductive system captures only truths”) completeness (“the deductive system captures all the truths”) undecidability (“there is no mechanical procedure for establishing whether or not an argument is valid”), and the Löwenheim-Skolem theorems (which concern some of the limits on the expressive power of first-order logic). Along the way we will study some set theory, recursive functions, Turing-machines, and the limits of computation. The course is fast paced and students are expected to supplement lectures with significant independent study. **This course is primarily intended for honours students in Philosophy and Computer Science.**

This is a course in metalogic. It builds upon the material in Logic I (Phil 279 or Phil 377), but is very different in character. In Logic II, we prove theorems about logical systems (and not in logical systems, i.e., there will be almost no formal proofs). Doing well in Logic I is no guarantee that this will come easy to you. Some of the material we will be covering is discussed in your 279/377 text— if you used the *Logic Book*, review chapters 8 and 11; in Chellas' *Elementary Formal Logic*, review chapters 7 and 9 and the appendices; in *Language, Proof and Logic*, review chapters 15, 16, 18.1-18.3; in *Formal Logic: Its Scope and Limits*, sections 2.7-2.10, 3.13-3.15, 4.13-4.15.

Evaluation

Grades in this class will be based on weekly homework, four assignments, a take home test, and a take home examination. There will be NO registrar scheduled final examination.

Due Dates

Homework questions will be given on Mondays and due on Wednesdays, with the first due January 23rd. There will be no homework due on February 20th or 27th.

Assignment 1	Monday January 28 th
Assignment 2	Monday February 11 th
Take Home Test	Thursday March 28 th
Assignment 3	Monday March 11 th
Assignment 4	Monday April 1 st
Take Home Exam	Friday April 19 th

Homework and assignments may be submitted either in-class, to the class drop box located in the Philosophy Department (12th floor Social Sciences), or electronically via the Blackboard site for the course. The take home test and exam may be submitted to the class drop box or via Blackboard. Submissions via email are NOT accepted.

Grading

- *Ceteris paribus*, the homework will collectively be worth 10%, the assignments will be collectively worth 40%, the test will be worth 25%, and the exam will be worth 25%.
- Students must receive a passing grade (D or better) on the take home exam in order to pass the course.
- Homework will not be individually graded, but sample answers will be given and discussed in class. Grades for the homework as a whole will be assigned as follows: 9 weeks submitted=A, 8=A-, 7=B+, 6=B, 5=B-, 4=C+, 3=C, 2=C-, 1=D, 0=F. Since there are ten weeks of homework, it follows that you may skip one without penalty.
- Tests and assignments will be graded on both technical accuracy *and* quality of presentation, including spelling and grammar. As noted below in the grading rubric, an A answer must be correct but also reasonably direct and elegant.

Grading rubric

On each assignment and test question you will receive a letter grade reflecting the level of mastery of the material shown by the work you submit. According to the *Calendar* letter grades are defined as follows:

- A Excellent—superior performance, showing comprehensive understanding of subject matter. (A solution to an assigned problem shows that you understand the problem, is complete and rigorously correct, and is reasonably direct and elegant.)
- B Good—clearly above average performance with knowledge of subject matter generally complete. (Your work demonstrates that you understand the problem and you give a complete solution, although there may be minor gaps in the proof, or the solution is correct but circuitous.)
- C Satisfactory—basic understanding of the subject matter. (Your work shows that you understand what the question is asking but your solution contains significant errors or gaps.)
- D Minimal pass—marginal performance. (It is not clear from your answer that you understand what the question is asking, or your proposed solution goes completely in the wrong direction.)

- F Fail—Unsatisfactory performance. (Your work fails to demonstrate that you've made a serious attempt to come to grips with the material; or your writing borders on incomprehensible.)

In computing your assignment or exam grade, your marks on individual questions will be converted to grade points as defined in the calendar (A = 4, B = 3, C = 2, D = 1, F = 0). There will be no +/- grades, but "slash" grades are possible and have grade point values 0.5 below the higher grade (e.g. A/B = 3.5). Each assignment or exam grade will be equal to the average of the grade point value of the questions (e.g. a 3 question assignment with grades A, B, B would receive a grade point score of 3.33). Your course GPA will be calculated according to the weights given above. *Ceteris paribus*, the final mark is the letter grade corresponding to the course GPA plus a margin of 0.1. For the final grade, +'s and -'s are possible too; as defined in the *Calendar*, +/- adds/subtracts 0.3 grade points. In other words, a course GPA of 3.9 or higher receives an final grade of A, at least 3.6 and less than 3.9 an A-, and so on. There is no D- grade. A+ is reserved for truly exceptional performance.

Late policy

Assignments will not normally be accepted after the deadlines unless special permission has been given by the instructor. Failure to submit an assignment or test on time will normally result in a mark of zero. Students who cannot submit an assignment or a test due to medical reasons or other reasonable grounds should contact the instructor as soon as possible.

Collaboration

Collaboration on homework and assignments is encouraged. However, you must write up your own solutions, and obviously you must not simply copy someone else's solutions. You are also required to list the names of the students with whom you've collaborated on the homework or assignment. ***If you collaborate without following these instructions, it constitutes cheating.***

Plagiarism

You might think that it's only plagiarism if you copy a term paper off the Internet. However, you can also plagiarize in a logic course, e.g., by copying a proof verbatim from the textbook or lecture notes (and only making the necessary changes to apply it to the assigned problem.) The point of logic problems which are similar to the proofs in the text or notes is to make you work through those proofs, understand them, and then prove a similar result on the homework or an assignment. Hence, all homework and assignment solutions must be in your own words; copying or paraphrasing closely from the text will be treated as plagiarism.

Course website

A course website on U of C's BlackBoard server has been set up. You will be automatically registered if you're registered in the class. To access the BlackBoard site, you can either go directly to blackboard.ucalgary.ca and log in with your UCIT account name and password, or you can access it through the myUofC portal (my.ucalgary.ca; log in with your eID). If you don't have an eID or UCIT account, see elearn.ucalgary.ca/help.html.

You may (and are encouraged to) submit homework and assignments online using the Assignment link on the left hand menu.

INTELLECTUAL HONESTY

Intellectual honesty is the cornerstone of the development and acquisition of knowledge and requires that the contribution of others be acknowledged. As a result, cheating or plagiarism on any assignment or examination is regarded as **an extremely serious academic offence**, the penalty for which may be an F on the assignment and possibly also an F in the course, academic probation, or requirement to withdraw. The University Calendar states that plagiarism exists when:

- *the work submitted or presented was done, in whole or in part, by an individual other than the one submitting or presenting the work (this includes having another impersonate the student or otherwise substituting the work of another for one's own in an examination or test;*
- *parts of the work are taken from another source without reference to the original author;*
- *the whole work (e.g., an essay) is copied from another source; and/or*
- *a student submits or presents work in one course which has also been submitted in another course (although it may be completely original with that student) without the knowledge of or prior agreement of the instructor involved.*

While it is recognized that scholarly work often involves reference to the ideas, data and conclusions of other scholars, intellectual honesty requires that such references be explicitly and clearly noted. Plagiarism occurs not only when direct quotations are taken from a source without specific acknowledgement, but also when original ideas or data from the source are not acknowledged. A bibliography is insufficient to establish which portions of the student's work are taken from external sources; footnotes or other recognized forms of citation must be used for this purpose.

ACADEMIC ACCOMMODATION

It is the student's responsibility to request academic accommodation. If you are a student with a documented disability who may require academic accommodation and have not registered with the Disability Resource Centre, contact their office at 220-8237. Students who have not registered with the Disability Resource Centre are not eligible for formal academic accommodation. You are also required to discuss your needs with your instructor no later than fourteen (14) days after the start of this course.

STUDENTS' UNION REPRESENTATIVES

The Faculty of Arts Representatives are: Sarah Damberger arts1@su.ucalgary.ca; Hana Kadri arts2@su.ucalgary.ca; Kelsy Norman arts3@su.ucalgary.ca; Jack Mills arts4@su.ucalgary.ca

FREEDOM OF INFORMATION AND PROTECTION OF PRIVACY (FOIP) ACT

The University of Calgary is under the jurisdiction of the provincial FOIP Act in all aspects of its operations as a publicly funded institution. The Department of Philosophy ensures the student's right to privacy by requiring all graded assignments be returned to the student directly from the instructor.

SAFEWALK

Call 403-220-5333 (24 hours a day/7 days a week/365 days a year) for a Safewalk volunteer to accompany you safely to your destination on campus including parking lots, housing, and LRT station. Or use a Campus Help phone.

PHILOSOPHY DEPARTMENT

The Department of Philosophy is located on the 12th floor of the Social Sciences Building and on the web at www.phil.ucalgary.ca

PHILOSOPHY UNDERGRADUATE PROGRAM ADVISORS FOR WINTER 2013:

Ann Levey (levey@ucalgary.ca)

Jeremy Fantl (jfantl@ucalgary.ca)

Lorraine Markotic (lmarkoti@ucalgary.ca)

For assistance with registration issues in Philosophy courses, contact Merlette Schnell (schnell@ucalgary.ca)
